GREETING-FORTY-SEVENTH-YEAR

I am indeed grateful to my many customers and friends who have, for a portion at least, of the past forty seven years used **Fords Sound Seeds, Bulbs and Plants.**

It has been and will be my aim in the future to please and satisfy every customer.

Colored pictures and elaborate catalogs are a big expense, which the customer has to pay.

We issue this plain little catalog and cut other overhead expenses to the minimum in order to give our customers the most good seeds bulbs and plants for the money paid us. I know my old customers appreciate this and trust all who have never given us an order will realize that we are able to make a substantial saving to our customers by this plan.

For 47 years we have been catering to the people who want to get the **Best Quality of Seeds, bulbs and plants** at reasonable prices.

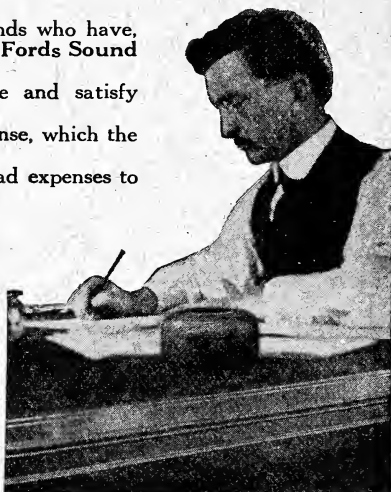

Why pay more than we charge when you can get no better quality.

Sincerely yours,

J. H. FORD,

Pres. and Mgr. Ford Seed Co.

Ravenna, Ohio, 1928.

ARTICHOKE

Large, Green Globe. Bears large flowerheads, which are prepared for eating the same as asparagus. The seed may be started in a hot bed, or in open ground when all danger of frost is over. When ready to set in the garden make rows 4 feet apart and set plants 2 feet apart in the rows. The plants when mulched, will live through the winter. Pkt. 10c., ½ oz. 35c., oz. 60c.

Jerusalem, Giant or White French. Valued for feeding stock; an excellent conditioner, particularly good for preventing hog cholera. Propagated from tubers, and may be cultivated the same as potatoes, producing immense crops. Lb. 30c., 3 lbs., 70c. Not pre-paid, lb. 25c., 10 lbs., \$1.50.

ASPARAGUS

Seed should be sown early in spring covering the seed 1 ½ to 2 inches deep. When the seedlings are one or two years old, they may be transplanted to the permanent bed. For home garden set plants 16 to 18 inches apart each way. In field culture make rows 4 feet apart and set plants 1 foot apart in the rows, with the crowns 4 to 5 inches below the surface. Rotted manure should be applied to the beds in the fall after cutting away the tops. Nitrate of soda, applied in the spring before growth starts, is beneficial when no rotted manure is used. Keep the beds thoroughly cultivated, which may be done before growth starts in the spring. Time will be saved by buying roots instead of seed.

Giant Argenteuil. Large, purple stalks, tender and of fine quality. Pkt., 5c., oz. 12c., ¼ lb., 30c.

Palmetto. Light green; early, large and productive; quality of the best. Pkt. 5c., oz., 10c., ¼ lb., 30c.

WASHINGTON. The New Giant Rust-proof Asparagus. This is the result of years of plant breeding by the U. S. Department of Agriculture. It grows very large and being rust-proof makes it a very valuable variety for both home use and market. Pkt. 10c., oz., 20c., ¼ lb., 65c.

ASPARAGUS ROOTS

We sell large quantities of these each year. They produce asparagus for cutting one or two years sooner than seed.

On good, deep soil 1,000 to 1,500 bushels per acre can be raised. Mangels make excellent feed for stock of all kinds.

CABBAGE

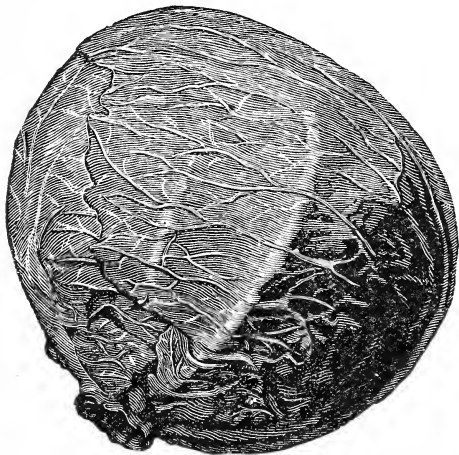

Cabbage seed has been a specialty with us for years, and our customers say the seed is good, because they get good results, and that is always the final answer. One customer wrote us that "From one and one-half acres of Glory Cabbage we sold \$650 worth." Another writes that from 1,000 plants grown from Ford's Seed he raised 1,00 solid marketable heads.

Ford's Glad Gardener says, "Glory is the Best Cabbage."

How to Grow Cabbage. For early, the seed should be sown in hotbed in March. For general crop, sow seed the latter part of May in open ground and in July transplant into rows 2½ by 2 feet or more for large-growing varieties; cultivate often.

Prices on this page include postage.

Ford's Glory, the Best of all Cabbages

FORD'S GLORY CABBAGE

The Best of All Cabbages. Glory has proven satisfactory wherever it has been planted. It matures quite early—about as early as the Wakefield, but makes a larger head than that variety, is much more solid and does not burst as badly. The stems are short, heads almost round, slightly flattened at the top and are extremely solid. There are few loose leaves, which is a great advantage, as the plants may be set very close together. The heart is white crisp-fine-grained, and tender, and cooks quickly. Owing to its earliness and the hardness of the heads it is an unusually good market sort. If the seed is sown in this latitude between June 1 and 10, it will produce excellent heads for winter use. It always sells for top price in market. The best of all for Kraut. Pkt. 10c., ½ oz. 20c., oz. 30c., ¼ lb. 75c.

Wibolt's Round Express. This is a new round headed cabbage similar to Copenhagen Market, but from one to two weeks earlier. It is solid, medium size, fine quality and a money maker for the market gardener as it can be placed on the market so early, thus commanding a high price. Don't fail to try this grand variety. Pkt. 10c., ½ oz. 25c., oz. 40c., ¼ lb. \$1.20.

Golden Acre. Very early small to medium, solid, round heads excellent quality for market or home use. Pkt. 10c., ½ oz. 25c., oz. 40c., ¼ lb. \$1.25.

Copenhagen Market. Originated in Denmark. The heads are large, round, and very solid, with a few outer leaves. It matures with the Jersey Wakefield and has become very popular with market-gardeners. Pkt. 6c., ½ oz. 20c., oz. 30c., ¼ lb. 75c.

Large Jersey Wakefield, or Charleston. Pkt. 5c., ½ oz. 15c., oz. 25c., ¼ lb. 75c.

Early Jersey Wakefield, Select Stock. Pkt. 5c., ½ oz. 15c., oz. 25c., ¼ lb. 75c.

Early Winningstadt. Pkt. 5c., ½ oz. 12c., oz. 20c., ¼ lb. 60c.

Allhead Early. Pkt. 5c., ½ oz. 12c., oz. 20c., ¼ lb. 60c.

Danish Roundhead. Solid; white; medium early and an excellent keeper; particularly good for storing in winter for early spring sales when sown late. Pkt. 6c., ½ oz. 20c., oz. 35c., ¼ lb. 90c.

Henderson's Succession. Pkt. 5c., ½ oz. 12c., oz. 20c., ¼ lb. 60c.

Houser. Very late; heads weigh 10 to 12 pounds apiece; they do not burst easily, but are solid, crisp and tender; a splendid variety, plants can be set close. Pkt. 10c., ½ oz. 25c., oz. 40c., ¼ lb. \$1.40.

Danish Ballhead. A particularly good variety of Danish origin and much prized by American growers on account of its solidity and great keeping qualities. It may be headed-in in the fall, and in the spring will be found to have retained its fine quality. Our seed is the solid-headed, short-stemmed type. Pkt. 6c., ½ oz. 20c., oz. 30c., ¼ lb. 75c.

"FROST PROOF" CABBAGE PLANTS

Will Mature Heads Two to Three Weeks Earlier Than Your Home Grown Plants and Double Your Profits.

These are grown along the Sea Coast of South Carolina and Georgia, where the soil and climatic conditions are suited for growing tough, hardy plants during the winter and early spring. They can be shipped to territory farther north and replanted in the open ground a month to six weeks sooner than the home-grown hot bed plants. These will stand a temperature of 20 degrees above zero without injury.

To get the advantage of these frost-proof plants they must be planted a month or six weeks earlier than home-grown plants. We fill orders from December 1st to May 1st.

The plants when received will be wilted and have a hard stunted appearance. Regardless of appearance, they will produce the crop results.

Ford's Sound Sweet Corn

Price of all Sweet Corns unless otherwise noted. Pre-paid Pkt. 10c., ½ lb. 16c., lb. 30c., 3 lbs. 75c.

For a good many years we have been specially interested in developing new varieties of Sweet Corn. A good many experiments have been made, and from all of these we have retained four sorts that we can recommend to all our friends—Ford's Early, Ford's Golden Sugar, Ford's Nectar and Ford's Improved Mammoth. These four Sweet Corns will keep your table supplied from early summer until late September, or even into October.

Sweet Corn should be planted from May 1 to July 1, in hills 3 to 4 feet apart each way, 5 kernels to a hill, covering an inch deep. When the plants are 4 to 5 inches tall, pull out all but two or three. Cultivate frequently.

One pound of seed will plant about 225 hills; 12 pounds for an acre. As there is no legal weight for Sweet Corn, we quote it by the pound. Different varieties vary in weight per measured bushel, from 40 to 48 pounds.

FORD'S EARLY. Ready for use in 60 to 65 days after planting. Scores of our customers who know this variety say that it surpasses all other early Sweet Corns in quality. The ears are from 6 to 9 inches long, and contain 8 rows of pure white kernels, which are large and extra deep for an early Corn. The stalks grow 5 to 6 feet high, can be planted more thickly than most varieties, and frequently produce two ears to the stalk. On account of its earliness, size and quality, it is unsurpassed by any variety for home use or market purposes. Many of our market-garden customers practically monopolize the early trade in Sweet Corn by growing Ford's Early. It very frequently sells for 50c per doz. on the early market. If the seed is planted at intervals of about two weeks through the season, Ford's Early will furnish a succession of Sweet Corn until frost kills the plants. See illustration at the left.

NECTAR. The grandest of all second-early Sweet Corns. Nectar was originated by Mr. Hamilton DeGraw, of New York, in 1906, it is a cross between Malakhoff and White Evergreen. It is unusually productive. It is very hardy and will stand more wet and cold weather without rotting in the ground than many early varieties. The stalks grow from 6 to 7 feet high, and many of them produce two large ears. There are usually 12 or 14 rows of kernels, very deep, resembling Stowell's Evergreen. For market-gardening this is the best second early variety to follow Ford's Early. The ears will remain in good condition for some time after they are ripe enough to gather.

FORD'S GOLDEN SUGAR. This new Corn is a cross between the White Evergreen and Golden Bantam. In 1915 we offered it for sale for the first time and it has given excellent satisfaction to those who have grown it. It is sufficient to say that of all the yellow Sweet Corns you will like this the best. The stalk grows 6 to 7 feet tall; ears are of good size, larger than Golden Bantam, and mature a little later than that variety. It is of a rich golden color, and our customers say it is the finest flavored yellow Sweet Corn they have grown.

Golden Bantam. Well-known yellow variety, with small stalks. Ears are usually not more than 5 inches long, but the grains are quite broad and exceedingly sweet. Ready for the table just after Ford's Early starts.

DeLUE'S GOLDEN GIANT. This new yellow Sweet Corn was first offered to the public in 1922, except by the originator and we quote below his description.

DeLue's Golden Giant excels all other early varieties in size, productiveness and quality, and all of the late varieties in quality and early maturity. It is the one corn for the market gardener who wants the greatest amount of the highest quality corn in the shortest period of time from the smallest piece of land. It is because of the extreme tenderness, combined with the exquisite rich sugary flavor, that the Golden Giant has become the standard of perfection for sugar corn and when you consider that its admirers report that it is one or two weeks earlier and two or three times as large as its own parent, the Golden Bantam, of better quality, deeper color and more productive, you may be sure that it has well earned the title of "The New Master of the Fields."

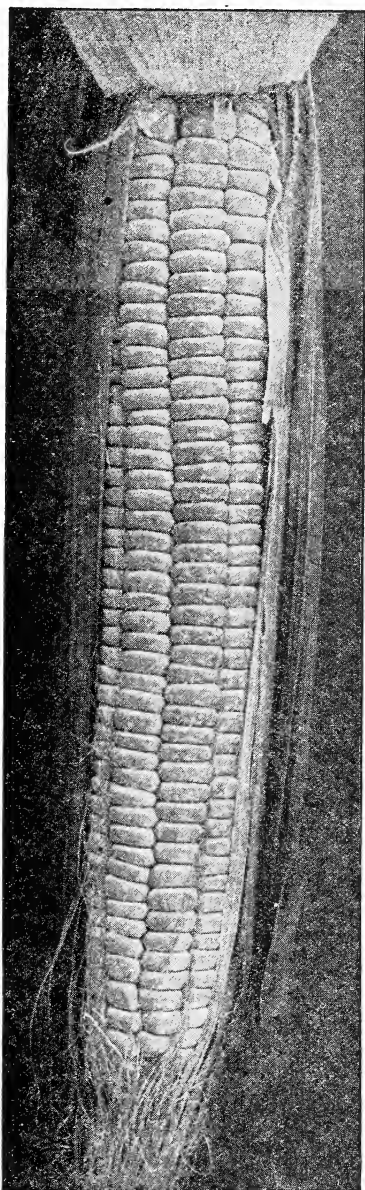

Country Gentleman. White, very sweet. Matures just before Evergreen. Kernels set irregularly on the Cob.

Price of all Sweet Corn unless otherwise noted. Pre-paid: pkt. 10c., ½ lb. 16c., lb. 30c., 3 lbs. 75c.

Ford's Early Corn

FORD'S IMPROVED MAMMOTH

A late all-round, every-purpose variety. For market, for canning, drying, or other home uses, the quality is unexcelled. If the seed is not planted too thickly the stalks will usually produce two ears each. The ears are large, medium thick, remaining good for table use for some time after maturity.

"WONDERFUL" CELERY

THIS IMPROVED CELERY BRINGS THE HIGHEST PRICE, BECAUSE OF ITS LARGE SIZE, HIGH QUALITY, EXTREME EARLINESS, AND BEAUTIFUL APPEARANCE

From all we can learn of the "Wonderful" it has proven to be indeed the most wonderful celery ever introduced and has created a sensation wherever grown.

The "Wonderful" was originated by Mr. S. J. Meisch and is the result of twenty years of Systematic Seed selection. Celery growing made Mr. Meisch rich and this celery which was the triumph of his life work is a fitting and most valuable heritage to all celery growers.

Authorities pronounce this the best Self-blanching celery. It matures two to three weeks before any other and blanches in half the time required by others.

It is large; The illustration shows its immense size. Notice the yard stick in comparison.

The stalks are broad and solid (do not grow hollow) and just tall enough to pack in crate without damaging the foliage.

The quality is very fine making it all in all a desirable and profitable celery for any purpose. It always commands the top price in market and has sold as high as \$1.25 per bunch of twelve stalks.

It is recommended by many Agricultural College professors, Commission Merchants and large celery growers and we feel safe in saying that we believe it to be all that is claimed for it. Pkt 10c., $\frac{1}{2}$ oz. \$1.25 oz. \$2.00.

FORD'S SOUND LETTUCE SEED

Lettuce may be grown in hotbed in winter, but for ordinary garden sow as soon as spring opens and thereafter in succession once in two or three weeks. Make the rows 15 inches apart and cover $\frac{1}{2}$ inch deep with fine soil, which should be firmed above the seeds. When the plants are up thin out to 3 or 4 inches apart and when those remaining are large enough for use, every other one may be taken out and leave room for the remaining ones to grow.

The head varieties should have 10 to 12 inches of space between the plants to form good heads.

Our Lettuce Seed is very carefully selected and will please the most critical gardeners.

FORD'S MUSKMELONS

Melons are strictly a tropical fruit, and there is no use in planting the seed before the ground is warm. The middle of May is plenty early enough to put in the seed, but if extra-early melons are desired, the seed may be sown in a hotbed on sod and transplanted in the same manner as cucumbers. The hills should be made at least 6 feet apart each way for Muskmelons, and 8 feet for Watermelons. The hills should be prepared in practically the same way as for cucumbers. When the plants come up and danger of bugs is over, thin them out to three or four plants to the hill. Hammond's Slug-Shot, sprinkled freely over the young plants, will prevent serious damage by the bugs and will not injure the plants. Spraying with Bordo will prevent blight. We can supply both of these. See quotations on page 46.

Golden Champlain

Nicholson's Honey Ball. A cross between Honey Dew and Cannonball of Texas origin, ripens in about 100 days, round, $6\frac{1}{2}$ inches in diameter, good keeper and shipper. The flesh is light green and very sweet. You should try this new variety. Pkt. 10c., oz. 20c., $\frac{1}{4}$ lb. 53c.

ROBINSON'S DELICIOUS

Slightly oval, with no ribs, heavily netted over the entire surface. Meat is fine-grained and sweet; the color is green with gold margin next to the seed-cavity. We consider this melon one of the best of recent introduction on account of its uniform shape and size, its superior quality and attractiveness. Every seed we offer will be from a select specimen. Pkt. 6c., oz. 15c., $\frac{1}{4}$ lb. 40c.

HONEY DEW

This melon is light cream color, changing to a more yellowish cream as it ripens; grows to weigh 7 to 8 pounds; nearly perfectly round, perhaps slightly oval. Flesh is very deep green, wonderfully sweet and luscious, with a fine fragrance. The grain of the flesh is not overly fine. The growth of the vine is more rugged than the ordinary Cantaloupe; the leaf is broader and heavier. It ripens about a week later than the ordinary type of Rocky Ford melon. The fruits can be kept for two months. Pkt. 6c., oz. 15c., $\frac{1}{4}$ lb. 40c.

Emerald Gem. Very early; smooth skin, emerald-green; flesh salmon-color, ripening right to the rind; sweet luscious flavor; vines hardy, thrifty, and prolific. Pkt. 6c., oz. 12c., $\frac{1}{4}$ lb. 35c.

GOLDEN CHAMPLAIN. Very early, and brings in the money before other kinds start ripening, of Ohio origin. It is a hardy and vigorous grower yields heavily, having produced crops returning \$700.00 to \$1,000.00 per acre. The melons are of good size, ribbed, skin dark green overlaid with heavy netting giving them an attractive appearance. The flesh is a rich golden color, free from stringiness, fine grained, melting, juicy, sweet delicious flavor clear to the rind.

"The Golden Champlain Melon is three weeks earlier than any other varieties we raise. Had the reputation of being the finest quality melon on the market and always commanded the highest prices. We realized at the rate of \$1,000.00 per acre on our Golden Champlain while other varieties only \$150.00 per acre, due to vines dying before later melons ripened." J. M. R., Lewisberry, Pa. Pkt. 10c., oz. 20c., $\frac{1}{4}$ lb. 53c.

Pollock No. 10-25. Medium Early; nearly round, heavily netted, seed cavity very small, flesh very thick, rich Salmon colored shading to green near the rind and of excellent quality. Certified Seed Potatoes

The term "Certified" as applied to Seed Potatoes implies that the crops while growing and after digging have been inspected by good authorities and have been found comparatively free from any disease.

To pass inspection these crops must be vigorous to withstand the ravages of disease. This vigor gives to the seed the ability to produce big crops increasing the yield per acre 30 to 80 bushels according to the variety.

The increased yield more than pays for the seed even at the higher price of the certified seed. The crop raised from it is of better quality and sells at the highest price.

We always try to have the best of everything and believe in handling Certified Seed Potatoes, we are giving our customers the best possible in seed potatoes.

All orders should be in early. Increase your yield by planting Certified seed this year.

We quote at time of making up this catalog prices are shown below.

FORD'S SELECT TOMATO SEED

Sow seed in hotbed in March or April, in rows 3 inches apart, covering the seed $\frac{1}{2}$ -inch deep. Water with quite warm water. When the plants are 2 inches high, transplant into flats 2 to 4 inches apart. Set in open ground when all danger of frost is over, in rows 4 to 5 feet apart and 3 feet apart in the row. Sprinkle a handful of ground bone in each hole before setting the plant. Tomatoes may be tied up to stakes with soft twine, and for the home-garden it is a good plan as the plants may be set closer together than if allowed to run at random.

Tomato seed is one of our leading specialties. Each year we make careful trials of the new varieties, as compared with the well-known standard varieties, and these tests enable us to decide which are worthy and which are not. The following list combines the very best of the old and new. Our seed is from carefully grown and well-developed specimens.

FORD'S OLD VIRGINIA ENSILAGE CORN

The Dairyman's Most Profitable Crop.

Old Virginia produces more tons per acre than any other; unexcelled for dairy feeding. Largest growers of silage declare Old Virginia superior to any other ensilage variety—much sweeter, better ears, keeps better in the silo, producing more milk. Even in the shortest season matures sufficiently for ensilage. It keeps better than any other corn we have tried in our own silo. This is truly a wonderful Ensilage Corn. We advise every grower to plant it. Our seed is exceptionally choice and of strong germination. We sell several thousand bushels each year.

For the very high quality of corn we sell the price quoted below is as low as we feel justified in quoting at time of making up this list. You have the privilege of returning the corn to us if not satisfied when you receive it.

Prices of Old Virginia, not pre-paid, lb. 20c., 7 lbs. 65c., 14 lbs. \$1.00, 28 lbs. \$1.80, 56 lbs. (bu.) \$3.50, 2½ bu. (full sack), \$8.00. Price subject to change. Pre-paid, lb. 25c., 3 lbs. 50c. Write for special prices on larger lots stating quantity you want.

BIGGEST YIELDER; MAKES THE MOST AND BEST ENSILAGE

"This is Old Virginia Ensilage Corn. 13 feet 4 inches high (off year). We have had it 14 feet 2 inches high. We used to plant 5 acres to fill a silo 10x28 feet; now 2 acres of Old Virginia fills it up chockfull and some to spare."—Harlon Shelley, New York.

"I have used Old Virginia Corn for two seasons. Last year I filled a 10x36 silo from 1½ acres. This corn grew to a height of 15 feet. A good many of my neighbors are sending to you for Old Virginia on account of this wonderful field of Corn."—R. E. Fritzell, Ohio.

"Last year I bought a bushel of Old Virginia Seed Corn and I raised enough Corn to fill one silo 10x30 and one 10x24 on 6 acres. Many stalks were 17 feet long. Believe it was the biggest Corn grown in this country last year it pays to buy good seed."—W. L. Stearns, Ohio.

"Last year I planted 8 acres in Old Virginia Corn and filled two silos holding 124 tons and had at least 15 tons left. Now I am ordering for myself and four of my neighbors. Next year you will have a big demand from this section of country."—Jas. McGhee, Ohio.

"We tried your seeds a year ago, and they were certainly fine. The Old Virginia Ensilage Corn grew stalks 16½ feet tall. Four acres, checked, three stalks in a hill, filled an 80 ton silo, and made excellent feed. It was the biggest piece of Corn I ever raised."—Earl A. Valentine, Mich.

"I have tried Old Virginia before, and can say that it produces large crops for the silo."—Deleus Anderson, Minn.

Old Virginia Corn, as grown by Harlon Shelly
New York

When planted on good soil the first part of May, with favorable weather and good cultivation, it produces an immense crop of grain, but may be planted up to last of June for Ensilage purposes and usually ripens when planted as late as June 1st. Choice Northern Ohio grown seed. Pre-paid: lb. 25c., 3 lbs. 50c. Not pre-paid: lb. 20c., 7 lbs. 70c., 14 lbs. \$1.15, 28 lbs. \$2.25, 56 lbs. (1 bu.) \$4.25.

Usually matures in 100 to 110 days. It is also valuable for Ensilage and may be planted as late as July 1 for this purpose. Price same as Ford's Sure Crop.

Improved Leaming. Matures in 110 to 120 days; stalks 8 to 10 feet; large, long ears; kernels deep golden yellow. With long season there is no better variety. Excellent for ensilage. Price same as Old Virginia.

Longfellow Flint. The best early; yellow flint Corn; long ears; a big yielder. Northern Ohio grown. Price same as Ford's Sure Crop.

Silver King. Matures in 100 to 110 days. Pure white, ears 7 to 9 inches long, a wonderful sheller and yielder, Northern Ohio grown seed. Same prices as Ford's Sure Crop.

Early Yellow Dent. We believe in this variety we have one that will mature as early as any known variety producing a big crop. Our patrons will be pleased with it on account of its fine growth of fodder, size of ears, bright yellow color, earliness and productiveness. We would like all who buy it to report results next fall. Price same as Ford's Sure Crop.

"I have used your seeds before and have found them to be just as you claimed for them."—H. W. Trout, Ohio.

Old Virginia Stands the Test Year After Year.

DWARF ESSEX RAPE

A great crop for feeding sheep and hogs. It grows 3 feet high and covers the ground so thickly that few weeds can grow. An acre will give two months' pasture to 36 sheep, and they will make rapid gain in flesh. Not pre-paid: lb. 20c., 3 lbs. 50c., 10 lbs. \$1.25, 50 lbs. \$4.25, 100 lbs. \$8.00.

CANADA FIELD PEAS

White. Good grower; very hardy; valuable for green fertilizer, hay or for pasturing hogs. Sow 1 bushel of Peas and 1 bushel of oats to the acre early in the spring, and they may be cut for hay in time to grow a crop of soy beans or cowpeas. Pre-paid: lb. 25c., 6 lbs. \$1.00. Not pre-paid: lb. 20c., 15 lbs. \$1.15, 60 lbs. \$3.75.

HAIRY or WINTER VETCH

This is a wonderful cover-crop, one of the best for plowing under. It succeeds everywhere, and produces good crops on poor, sandy soils. It makes a great root-growth, and the roots gather nitrogen in abundance. It remains green all winter and is splendid for pasture. The seed may be sown broadcast from March to November, using 20 pounds with a bushel of oats or rye, to the acre. It may also be sown in corn fields and other crops at the last cultivation and makes a great growth to plow under the following spring. Price pre-paid: Pkt. 5c., lb. 35c., 3 lbs. \$1.00. Not pre-paid: lb. 30c., 10 lbs. \$2.00, 50 lbs. \$7.50, 100 lbs. \$14.00. Ask for quotations on large lots.

SOJA, or SOY BEANS

A valuable legume, growing in favor for both ensilage and forage. It thrives on land that is too light for clover and bears wonderfully on good soil. Sow ½ to ¾ bushel to the acre, in drills 2½ to 3 feet apart. It is preferable to the cowpea for the North, as it matures more rapidly. Like clover, the roots gather nitrogen, enriching the soil. Soy Bean hay is equal to Alfalfa in feeding value.

Wil-Bo Seeders

The Wil-Bo Seeder is the fastest sowing seeder made, saving both time and money. It is the most economical because the patented regulator sows accurately the number of pounds of seed desired per acre. It prevents under sowing and a scanty crop as well as over sowing and the excessive waste of seed.

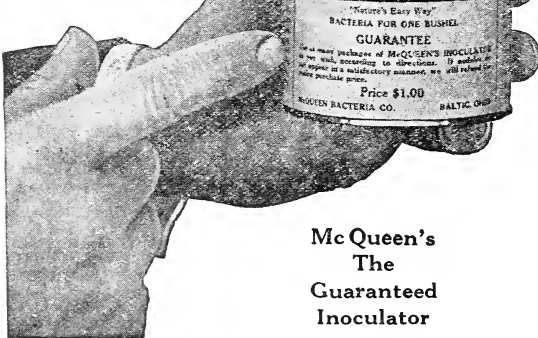

The regulating slide and graduated disc are on the inside of bag and easily accessible. By giving the tapered hopper a light blow with palm of the hand and sliding the tube through the sack, the regulator is exposed and can be set to any number of pounds per acre. Pre-paid, \$1.15; Not pre-paid, \$1.00

Ford's Sound Flower Seed

DIRECTIONS FOR GROWING

More flower seeds are probably destroyed by planting too deeply than by any other one cause. Such small seeds as Petunia, should be merely covered lightly, whether in open ground or in boxes. In preparing the ground, provide very fine soil, pressed down lightly and evenly and moistened thoroughly with warm water. When the water has soaked away, sow the seed; cover evenly with fine, dry soil not over 1-16 inch for the finest seeds and 1-8 inch for seed the size of Pansy seed.

If the bed is small enough lay glass flat on the surface; this will keep the ground from baking and will prevent washing in heavy rains. When growth has begun, lift the glass slightly by propping it with something and when it is finally removed the young plants should be shaded with thin cloth or paper if the sun is very hot. Keep the bed well weeded, and the soil frequently stirred to prevent the formation of crust.

For convenience in ordering we give each variety a number, which should be used in place of the name. This will help us in filling orders and will also prevent mistakes. Abbreviations are as follows: A., annuals, or plants which live only one year; B., biennials, or plants which live two years; H., hardy; H. H., half-hardy; P., perennial or hardy plants which live for a number of years. M., indicates several varieties mixed in the packet. All seeds in the following list will be sent postage pre-paid. ASTERS HHA

Asters are easily grown and their various forms and colors are always offering something new; they are especially good for cutting. For a continuation of bloom make first sowing of seed in March, transplanting to open ground when danger of frost is passed. Later plantings may be made at intervals of 2 or 3 weeks up to June 1st. 37 Heart of France Aster

The best pure red Aster ever introduced. Opening red as the purest ruby, it deepens with age and retains its remarkable beauty to the very end. The petals appear strikingly changeable, showing now a glow and sheen quite unique, now a soft, warm velvety texture. The flowers are large and full. The plants are of branching type and very robust habit. The stems are long and strong. The plants begin to bloom quite early in the season and retain their brilliancy and luster for a longer period than almost any other color. It has supplanted all other red Asters because of its marvelous beauty. Pkt. 15c., 4 pkts. 50c.

33 New Fancy Yellow. One of the largest Aster growers in the U. S. says of this new variety, "This is by far the best yellow we have yet grown; it is fairly large and fully double. We have put this variety in place of Peerless Yellow and believe our friends will like it. It is the only Yellow Aster that we offer." Pkt. 20c., 3 pkts. 50c.

39 Vick's Silvery Rose Aster

Here is another robust, long-stemmed, large flowering new variety. Every petal is a combination of deep lilac-rose, almost cerise, very delicately threaded with white. The threads are so tiny as to give the petals a silvery sheen. Even the slightest change in light will shade the petals from a rich glowing, rosy cerise to a silvery rose. The old-fashioned color, ashes of roses, exactly describes this color. The plants are very vigorous. The stems are unusually long and the flowers very large. This variety stands out above every other in the field in which it grows for size and vigor. Pkt. 15c., 4 pkts. 50c.

40 New Japanese, or Ostrich Feather. Immense flowers 5 to 6 inches across. Petals long, wavy and curled; plants 15 to 18 inches high; well-branched. M. Pkt. 8c., $\frac{1}{4}$ oz. 25c.

Vick's Branching Aster

|-------------|----------------|

Ford's Small Fruit Plants

STRAWBERRIES

These plants are grown on new land and are strong and vigorous and will give the best possible results.

We guarantee the safe arrival of these plants. Should they fail to grow we will replace them at one-half price if ordered before the spring shipping season of the following year is over. We do not handle Strawberry plants in the fall.

Varieties marked P. are Pistillate and require some Bisexual (B), variety planted near them in order to produce fruit.

Premier. (B) The earliest of all. Too much praise cannot be given this most wonderful early berry. While extremely early it seems to be frost resistant. It has given perfect satisfaction where ever grown, and produces abundant crops. The berries are large, bright red color, sweet of fine quality, and very uniform in shape and size. It is an all around strawberry, good for market, table use or canning. A money maker for the commercial grower.

Gibson. (B) A leading market variety either for home or distant shipping, as it is firm and holds up well. An abundant bearer, the vines which are strong are loaded with fruit of large size, which is dark glossy red, extending clear through to the heart. Especially valuable for canning. It has been thoroughly tried and proven a success in all kinds of soil. It ripens medium late.

Senator Dunlap. (B) Medium early. Dark red, good polenizer. About the same as Dr. Burrill. Price same as Dr. Burrill.

Eaton. (B) Very firm, making it a good shipper. A heavy yielder, large size; dark red, clear through to the heart, perfect shape, fine quality. Sells at highest price. Ripens medium late.

Sample. (P) Large; firm; commences to ripen in mid-season, and continues till late; healthy; fruit good quality. One acre produced 30,000 quarts 30 months from planting. No berry has stood the test under all conditions better than the Sample.

Mastodon Evebearing B

The largest of all Everbearing Strawberries, 18 berries have filled a quart basket. It bears from Aug. to freezing weather stops it the same year as planted and then again the following June and again in the fall. The berries are not only large but are of fine quality and bright red attractive color. The plant is vigorous and very productive, more so than any other Everbearing variety. The proper way to treat the plants after setting is to keep all blossoms picked off until July. Then they will continue to blossom and bear fruit till snow flies. You will find a lot of satisfaction in this wonderful berry either for home use or market. It has proven a really profitable variety for fall market.

"I have bought your seeds for a number of years and they are fine."—Rachel J. Brown, N. Y.

"We have dealt with you people for several years and always got honest treatment."—Helen N. Grodhaus, Ohio.

"I have used your seeds and always find them reliable. Will not have any other."—Mrs. A. G. Timms, Ohio.

Vigoro Makes Strawberries Grow And Produce Big Fruit.

Strawberries—Continued

Bissell. (B) This is one of the most vigorous growing varieties we have ever seen. The fruit is of largest size, very firm, high quality, bright red color and commands top notch price in market. Ripens mid-season to late.

Pearl. (B) Latest of the June bearing varieties. Large size, dark red, firm. Coming as it does so late it sells for high price.

LARGE QUANTITIES

If large quantities of Plants or Shrubs are wanted. We will be pleased to make special prices on receipt of your list.

Dr Burrill. (B) This is an improved Senator Dunlap and what may be said of the latter will apply also to the Dr. Burrill. It produces lots of plants and yields large crops. It ripens medium-early. Fruit is of good size, firm, dark, glossy red, of even shape and high quality. One of the real good older varieties.

Aroma. (B) The big fancy late strawberry. If you begin the season with Premier and close it with Aroma you have covered a long season. The Aroma produces uniformly large berries, which are round in shape, deep, glossy red in color, having a tough skin and firm flesh, which make it an excellent shipper. Its quality recommends it as an all round berry.

THE "BACON" SEEDERS

The large heavy drive wheel of the "Bacon" is on the rear, which results in three important points of superiority over other seeders which have the front wheel drive:

(1) In working any hand seed drill there is a natural tendency to throw considerable weight downward on the handles, which results in raising the front wheel somewhat off the ground which results in spaces of light sowing, or no sowing whatsoever.

(2) THE "BACON" LARGE HEAVY DRIVE WHEEL BEHIND will not work into the soil but on it, thus running much easier.

(3) Because of the fact that on the "BACON" THE LARGE HEAVY DRIVE WHEEL IS BEHIND, the entire drilling unit can be removed by merely loosening two bolts, which leave the cultivator ready for the particular attachments desired without any modification of the front wheel or cultivator frame.

The feed of the "Bacon" drill is the most perfect to be found on any drill made. It is adjustable for sowing all kinds of seed from turnip to peas. The construction of the feeding device insures an even flow of seed which is a most important point with all gardeners.

THE "BACON" CULTIVATOR

Through the use of ribbed malleable frame and the proper distribution of metal, produce a line of hand cultivators which combine rigidity and strength with extreme lightness of working parts, enabling the operator to do unusually close work without fatigue. Every gardener that has used one vows that he would not be without his "Bacon" cultivator. Our attachments include everything which is necessary for the proper cultivating of all the regular crops.

The "FORD" Pear

PRACTICALLY SEEDLESS and CORELESS

Excellent Quality, Beautiful Color, Good Seller
Splendid Canner, No Waste, Tree Hardy.

FORD PEAR greatly reduced and cross section showing absence of core and seeds

This is one of our introductions which we want everyone who reads this catalog to plant and in order to have it thoroughly disseminated we are offering: One Root Graft Free with Every Order of \$5.00 or Over. While the few thousand we have set aside for this purpose last and if asked for when order is given.

We are pleased to offer this wonderful Pear of our own introduction, and are confident it will become a world-wide favorite as soon as its splendid qualities are known. The Ford is practically free from seeds, about nine-tenths of the fruits containing none at all, and we have never seen more than two seeds in any single specimen.

There is also no core to speak of. Illustration of this Pear was made direct from a photograph and shows a section of a specimen cut through the center. Notice that it shows no core or seeds at all. The absence of core and seeds makes the Ford a splendid Pear to can, as there is practically no waste. The quality of the Ford Pear is rich, sweet and juicy, and the color is a rich yellow when fully ripe. It is similar in appearance to the Bartlett, but has a distinct flavor and is three weeks later.

Being very desirous to have this pear grown by all our customers we have made up a few thousand root grafts which can be sent easily by mail and if set so that only 2 inches of the graft is above ground they will grow into nice trees very quickly. Price, Each 25c., 3 for 50c., 7 for \$1.00, 15 for \$2.00.
